

DELTAMENT 10%

The first gaseous bronchodilator in the world with unique formulation

menthol Based

New generation of bronchodilator drugs Gaseous and with very immediate effect Along with reducing the cost of treating bronchitis and influenza and without the need for equipment

Commonly, to reduce the effects of respiratory diseases including bronchitis and influenza, expectorant products are used together with various bronchodilators to improve the breathing of the flock while emptying the respiratory tracts of mucous fluid, and ultimately prevent the occurrence of casualties, especially in large chickens. The use of these drugs is in the form of a powder or liquid soluble in water, and the period of use is generally 3 to 5 days but DELTAMENT 's gas, without the need for equipment, in gaseous form, will show its effect on the herd after 12 hours in just one use.

Active ingredients: **Crystalline menthol 10%**

Method of Use:

First, block the windows and air inlets. Then choose the right amount of the product according to the target space. Before use, shake the can so that the settled materials are homogeneous. Then open the lid of the can and after placing the product activator wick inside the powder, light the wick with the help of a lighter and put the perforated lid of the product on the can and the gas release will start from the can. For the best results, the gas should be locked in the hall for 10-15 min and then aerated. In case of acute illness, you can repeat gassing 24 hours later

Note: Due to the hotness of the can during the gas release process, avoid placing the can directly on the surface.

This product can be packed in three weights of 400, 1000 and 1400 grams Each 400 grams will be enough for a space equivalent to 750 cubic meters and each 1000 grams will be enough for a space equivalent to 1800 cubic meters Each 1400 grams will be enough for a space equivalent to 2500 cubic meters.

Recommended dosage: For every 10,000 pieces of chicken, 5 cans of 400 grams of DELTAMENT are recommended.

Attentions:

- This product should be stored at a temperature below 25 degrees Celsius and away from sunlight
- Before opening the lid of the can, you must shake the can completely so that the settled material is uniform
- When using the product, make sure that the perforated lid of the can is completely installed on the can
- Do not swallow the contents of the can and if it happens, see a doctor immediately
- Due to the non-toxicity of the gas coming out of the product, the presence of humans in the breeding hall during the performance will not cause any sensitivity or complications, only the respiratory tract may be slightly irritated due to the high concentration of menthol gas.

Storage condition

Keep in a cool and dry place and keep away from children. Do not mix this product with other chemical compounds
